

## Component Inspection

### Check EMC

1. IG KEY OFF.
2. Disconnect EMC connector.
3. Measure resistance between EMC(+) terminal and EMC(-) terminal of EMC connector .(Components side)

**Specification :** About 1.6 (at 23°C)

4. Is the measured value within specification ?

<b>YES</b>	Check 4WD ECM connectors for looseness, poor connection, bending, corrosion, contamination, deterioration, or damage. Repair or replace as necessary and then go to "Verification of Vehicle Repair" procedure.
<b>NO</b>	Substitute with a known good EMC and check for proper operation. If the problem is corrected, replace EMC and then go to "Verification of Vehicle Repair" procedure.
